

MUHAMMAD AMIN BIN AZMAN

3.4U INSPECTION ENGINEER / DATA RECORDER (OFFSHORE)

PERSONAL DATA

Name	: MUHAMMAD AMIN BIN AZMAN
Date of Birth	: 17th February 1987
Nationality	: MALAYSIAN
Current Location	: Penang, Malaysia (Available for Immediate Worldwide Offshore Mobilization)
Point of Hire	: PENANG, MALAYSIA
Contact No.	: +60125065516
Email Address	: aminazman.inspection@gmail.com
LinkedIn	: linkedin.com/in/aminazman-inspection
Visas / Work Status	: ADNOC Offshore Induction Clear (UAE / Middle East Valid Oct 2027) Right to Work: Malaysia & SEA Open to Client Visas Worldwide

PROFESSIONAL QUALIFICATIONS & COURSES ATTENDED

Underwater Inspection Controller Grade CSWIP 3.4U	: Cert No: 542968 Issued: 24 Oct 2023 Date of Expiry: 25th July 2028
Petronas Offshore Safety Passport	: Cert No: OSP20240040915 Date of Expiry: 16th September 2026
FOET & Travel Safely By Boat with CA-EBS (OPITO approved / BOSIET)	: OPITO Standard: 5707 / 5750 Date of Expiry: 1st December 2026
Offshore Medical Examination (ADNOC Approved)	: Date of Expiry: 27th October 2026
ADNOC HSE Induction	: Date of Expiry: 30th October 2027
Offshore Medical Examination (OEUK & Petronas Approved)	: Clinic: Klinik Berkat Sentral Date of Expiry: 16th September 2026
Basic H2S Training (OPITO Approved / Solas)	: OPITO Course Code: 9014 Date of Expiry: 27th October 2027
Mercury Awareness Training (CLBSADL012)	: Date of Expiry: 3rd June 2027
Petronas Carigali Sdn Bhd Permit to Work (PCSB PTW Level 1)	: Date of Expiry: 13th October 2027
Certificate of Appreciation (KL Petrogas & Carigali Hess)	: Issued by KL Petrogas & Carigali Hess Operating Company Provision of Underwater Inspection Services (Cakerawala Field Oct 2024)
Petronas Competency Card (Alam Maritim)	: Cert No: CCC20240045814 Issued: 19th Oct 2024 Date of Expiry: 13th March 2026
Petronas Competency Card (Tanjung Offshore)	: Cert No: CCC20240037317 Issued: Earlier Campaign Date of Expiry: 13th March 2026
Seafarers' Identity Document (SID)	: Doc No: 202423017202 Date of Expiry: 20th March 2029
International Passport	: Passport No: A70360403
Bachelor of Engineering (Honours) Petroleum Engineering	: Issued by: Universiti Teknologi Malaysia (UTM) CGPA: 3.44 Graduation Date: 25th September 2010

* Note: Expired/expiring certifications can be quickly renewed upon project mobilization or company sponsorship.

TECHNICAL SKILLS & SYSTEMS EXPERTISE

Subsea Inspection Suites	: Sirrihatt SirOnline, IDAMS WinCairs, OBS Studio, Digital Edge (EdgeDVR)
Advanced Imaging & 3D Modeling	: Voyis Discovery 3D Laser & VSLAM Acquisition, Agisoft Photogrammetry (Officially Trained by Voyis Canada), Fugro DVR & Fugro Sense Structures (Trained at Fugro HQ, Dubai)
ROV Systems & Deployment	: SMD Atom A6 Work Class ROV, WROV Jerung 01, WROV Quasar 06, Seaeye Tiger, SEAMOR Chinook, Videoray Defender, Oceanus Pro Defender, Platform-Based Mini ROV Setup & Manual Rigging
Sonar & Survey Hardware	: Multibeam Echosounder (MBES Sonar) Bathymetry & Seabed Profiling, Subsea Pipe Tracker (TSS 440 / TSS 350) Depth of Burial (DoB) & Route Tracking, Mechanical Scanning Sonars
NDT, UWILD & Integrity Operations	: UWILD Vessel Inspections (Propulsion Thrusters, Hull Plating, Sea Chest Strainers, Bilge Keels, Rudders), Impact Subsea FMD Oceanscan, FMD Gamm@scan, ISIS & IICORR CP Logging, Buckleys Bathycorrometer CP, Underwater MPI & ACFM (Assisted the ACFM Operator), GVI, CVI, Cygnus UT Wall Thickness, Welding Inspection (RT/MT/PT/UT)
Systems Troubleshooting & Data QA/QC	: Offshore Hardware & Software Troubleshooting (ROV Video Drops, Serial Data Comms, Multiplexers, Sensor Power Links), CSWIP 3.4U Data QA/QC Verification, Anomaly Severity Classification, DPR & Final Client Reporting
CAD & Software Utilities	: AutoCAD 2D/3D, SketchUp, MS Office (Word, Excel, Access, PowerPoint, Project, Visio)

OFFSHORE EXPERIENCE WORK GRID MATRIX

PERIOD	CLIENT & COMPANY	VESSEL / ASSET LOCATION	ROV & EQUIPMENT	PRIMARY SCOPE & ROLE
2 Dec 2025–1 Jan 2026	Fugro Middle East / ADNOC	ROC, Fugro HQ Dubai	Voyis 3D Laser, VSLAM, Agisoft	3.4U Insp Eng (Tech Onboarding)
26 Oct–4 Nov 2025	Fugro Middle East / ADNOC	ROC, Fugro HQ Dubai	Upper Zakum Work Packs	3.4U Insp Eng (Project Scoping)
18–26 Aug 2025	T7 Global / PCSB & RINA	T7 Elise MOPU (Bayan Field)	SEAMOR Chinook ROV	CSWIP 3.4U Insp Eng (Class & Statutory Cert)
24 Jun–11 Aug 2025	Sirrihat / Technip MMHE	Platform Deck (Kasawari Field)	Oceanus & Videoray Defender	3.4U Insp Eng (Baseline & FMD)
26 Jan–21 Mar 2025	Sapura Subsea / PTTEP	Sapura Conquest (DSV)	WROV SMD Atom A6 / Air Dive	3.4U Insp Eng (UWILD, MBES, Pipe)
23 Oct–28 Nov 2024	Alam Maritim / PCSB	DP2 Meo Resolution	WROV Jerung 01 / Seaeye 845	3.4U Insp Eng (Gamma FMD & DoB)
9–19 Oct 2024	KL Petrogas / CHOC	Mermaid Sapphire (DSV)	WROV Quasar 06	3.4U Insp Eng (Debris Clearance)
21 Aug–6 Sep 2024	T7 Global / PCSB	AWB Petra (Dulang Field)	ROV Argos Spread	3.4U Insp Eng (Dulang Platforms)
13 Jun–6 Jul 2024	T7 Global / PCSB SBA	AWB Perdana / EWDP-G	Mini ROV Chinook	3.4U Insp Eng (EWDP-Gas Insp)
16 Apr–1 Jun 2024	T7 Global / PCSB SBA	SK Marco Polo / EWDP-A	Mini ROV Chinook	3.4U Insp Eng (EWDP-Prod Insp)
Oct 2023–Jan 2025	Sirrihat Subsea Services	Subang Jaya Office, Selangor	Sirrihatt / CAD Workstation	Data QA/QC Coordinator / Onshore Technical Support

DETAILED CAMPAIGN & EMPLOYMENT TIMELINE

Company : Fugro Middle East
Project : Advanced Technology Onboarding (Upper Zakum Field Cluster Framework, Fugro HQ, JAFZA, Dubai)
Duration : 2 Dec 2025 – 1 Jan 2026
Location : ROC, Fugro HQ, Jafza Dubai
Position Title : **3.4U Inspection Engineer (Advanced Technology Onboarding)**

Scope/Details:

- **Systems Mastery & Onboarding:** Completed comprehensive corporate training at Fugro HQ, JAFZA, mastering VOYIS Live Discovery, VSLAM Acquisition, Agisoft Photogrammetry, and FDVR & Sense Structures data acquisition suites.
- **Technology & Software Configuration:** Assisted in setting up subsea 3D photogrammetry and optical modeling software configurations, conducting simulated remote data acquisition workflows to ensure campaign readiness.

Company : Fugro Middle East
Project : Project Readiness & Scoping (Upper Zakum Field Cluster Framework, Fugro HQ, JAFZA, Dubai)
Duration : 26 Oct 2025 – 4 Nov 2025
Location : ROC, Fugro HQ, Jafza Dubai
Position Title : **3.4U Inspection Engineer (Project Readiness & Scoping)**

Scope/Details:

- **Project Readiness & Asset Scoping:** Mobilized to Fugro HQ, JAFZA for initial framework preparation, executing detailed work pack reviews and asset scoping for the Upper Zakum jacket inspection and crossing survey.
- **Engineering & Software Setup:** Assisted in preliminary subsea 3D photogrammetry software setup, performing data-readiness checks on engineering drawings and jacket node mapping.

Company : T7 Global Bhd / Independent Subsea Specialist
Client : Petronas Carigali Sdn Bhd (PCSB - Sarawak Asset) / RINA Class Society
Project : Subsea Intermediate Structural Inspection for Class & Statutory Certification (Bayan Field, Offshore Sarawak)
Duration : 18 Aug 2025 – 26 Aug 2025
Vessel/Facility : T7 Elise MOPU (4-Legged Mobile Offshore Production Unit)
Position Title : **CSWIP 3.4U Subsea Inspection Engineer / Data Controller (Class & Statutory Certification)**

Scope/Details:

- **Workstation & Inspection Spread Mobilization:** Single-handedly commissioned the subsea inspection suite from scratch on board T7 Elise MOPU—assembling, calibrating, and troubleshooting video acquisition hardware, telemetry sensors, and real-time logging systems.
- **Deck-to-Sea ROV Operations & Relocation:** Rigged and executed manual launch & recovery (LARS) operations for the SEAMOR Chinook ROV directly from the MOPU main deck. Systematically rigged, demounted, and re-established the full inspection spread across all four (4) jack-up legs to guarantee 100% full structural coverage.
- **Class & Statutory Certification Survey:** Executed intermediate subsea structural inspections strictly complying with Class & Statutory Certification requirements for Permanent Offshore Installations under PCSB and RINA Class Society.
- **Structural Integrity & NDT (GVI & UTWT):** Led real-time data acquisition for General Visual Inspection (GVI) and Ultrasonic Thickness Measurement (UTWT) wall thickness surveys across all 4 jack-up legs to assess localized corrosion, structural wastage, and overall structural health.
- **Real-Time Data Management & On-Site Class Sign-Off:** Managed live inspection logging, photo/video synchronization, and anomaly tagging via Sirrihatt Inspection Suite. Authored and compiled the preliminary inspection report on-site, successfully securing immediate verification and formal sign-off from the RINA Marine Representative/Class Surveyor.

Company : Sirrihat Subsea Services Sdn Bhd
Client : Technip MMHE JV
Project : Platform Baseline Inspection Campaign (KSCPP & KSDP-A Platforms, Kasawari Field, Sarawak Waters)
Duration : 24 Jun 2025 – 11 Aug 2025
Vessel/Barge : Platform-Based Operation (Manual Launch Mini ROV & Workstation Rigging on Platform Deck)
Position Title : **3.4U Inspection Engineer / Data Recorder (Offshore)**

Scope/Details:

- **Spread Rigging & Mobilization:** Engineered and rigged dedicated platform-based inspection workstation on KSCPP & KSDP-A decks, executing safe manual launch and recovery setups for Mini ROV systems in accordance with platform safety and PETRONAS / TMJV requirements.
- **Subsea Inspection Execution (WD ~110m):** Executed comprehensive baseline structural integrity inspections across 8-legged (KSCPP) and 4-legged (KSDP-A) jacket structures up to 110m water depth. Managed data acquisition covering GVI & CVI (jacket members, conductors, caissons, risers, support clamps), Selected Anode Inspection (SANI), Marine Growth Inspection (MGI), Splash Zone Coating Inspection (SZCI), and seabed scour assessments.
- **Advanced NDT & FMD Operations:** Operated Impact Subsea FMD Oceanscan systems on targeted structural members to detect flooded members. Calibrated sensor arrays, logged real-time acoustics/data via Sirrihatt Inspection Suite, and verified data validity under offshore current constraints.
- **Data QA/QC & Deliverables Management:** Spearheaded CSWIP 3.4U Data QA/QC protocols, ensuring precise video timestamp cross-referencing, anomaly severity tagging, and daily reporting. Compiled comprehensive draft baseline survey reports for Technip MMHE JV approval.
- **Emergency Recovery & Contingency Execution:** Demonstrated operational resilience by managing offshore emergency situations involving underwater Mini ROV entanglements. Initiated fresh hazard identification, updated Toolbox Talks (TBT) and Risk Assessments prior to recovery, and assisted in executing emergency recovery procedures using secondary rescue ROV spreads equipped with manipulator grabbers/hooks and soft-rope/tether management to safely dislodge and recover snagged assets without asset loss or structural damage.
- **HSE & Operational Compliance:** Ensured strict compliance with Platform Work Permits (PTW Level 1 & 2), SIMOPS, H2S/Mercury awareness, and OIM/CSR daily operational briefings.

Company	: Sapura Subsea Services
Client	: PTTEP Sarawak Oil Ltd
Project	: Subsea Inspections & Operations Support (SKA Sarawak Waters)
Duration	: 26 Jan 2025 – 21 Mar 2025
Vessel/Barge	: Sapura Conquest (Vessel)
Position Title	: 3.4U Inspection Engineer / Data Recorder (Offshore)

Scope/Details:

- **Integrated Subsea Inspection & SIMOPS Coordination:** Coordinated real-time data logging and technical compliance for concurrent Air Diving operations and Work Class ROV (SMD Atom A6) deployments across multiple jacket structures (BE-SA, PE-SA, SA-SA) under PTTEP Work Permit (PTW/CWP) and JSA guidelines.
- **Diver-Assisted Anode & Metrology Assessments:** Supervised Air Divers in executing high-precision Selected Anode Inspections, managing tactile measurements, remaining volume estimations, structural attachment integrity checks, and detailed pitting corrosion profiling (depth, length, and distribution metrics).
- **Subsea Debris Clearance & Rigging Operations:** Oversewed subsea structural clearing operations involving severe jacket leg foulings—specifically the assessment and removal of heavy subsea anchor wire wrapped around jacket legs using diver-operated / ROV-assisted hydraulic cable cutters.
- **Subsea Pipeline Tracking & Bathymetry Profiling (TSS 440/350 & MBES):** Calibrated and operated TSS 440/350 Pulse Induction Subsea Pipe Trackers integrated with Multibeam Echosounder (MBES) spreads on WROV SMD Atom A6. Executed real-time logging for continuous Depth of Burial (DoB) tracking of buried subsea pipelines, Top-of-Pipe (ToP) elevation mapping, trenching profile assessments, and seabed exposure analysis across PTTEP SKA field pipelines.
- **Subsea Pipeline Protection, Appurtenances & Free-Span Surveys:** Managed real-time data acquisition and visual/CP profiling for pipeline free-span suspensions, risers, J-tubes, and subsea stabilization structures along pipeline routes, including:
 - **Risers & Touchdown Zones:** Subsea riser bases, protection frames, riser clamps, and J-tube entry seals.
 - **Stabilization & Crossings:** Condition surveys on flexible Concrete Mattresses, Grout Bags, Concrete Sleepers, and subsea crossing clearances.
 - **Coating & Scour Integrity:** Concrete Weight Coating (CWC) spalling, field joint fill conditions, and seabed scour erosion at pipeline touchdown points.
- **UWILD & Asset Integrity Monitoring:** Executed Underwater Inspection in Lieu of Drydocking (UWILD) on Sapura Conquest hull structures (thrusters, sea chests, bilge keels). Performed close-monitoring surveys on FSO propeller clamps for seal leaks and verified critical subsea valve isolations.
- **NDT Setup & Data Verification (ACFM & MPI):** Assisted NDT specialists and ACFM operators in offshore setup and signal verification for Alternating Current Field Measurement (ACFM) and Underwater Magnetic Particle Inspection (MPI) on critical node welds.
- **Onsite Hardware & Network Troubleshooting:** Demonstrated strong technical problem-solving by diagnosing and resolving real-time offshore hardware/software issues onboard Sapura Conquest, including ROV video multiplexers, serial communication protocols, sensor interfaces, and Sirrihatt Inspection Suite database syncs—ensuring zero survey downtime.

- **Data QA/QC & Daily Client Reporting:** Managed end-to-end CSWIP 3.4U Data QA/QC, anomaly severity logging, daily progress reporting (DPR), and compiled draft interim baseline/UWILD reports for PTTEP representatives.

Company : Alam Maritim Resources Berhad
Client : Petronas Carigali Sdn Bhd (PCSB)
Project : Major Platform & Pipeline Inspection Campaign (SKA Sarawak Waters)
Duration : 23 Oct 2024 – 28 Nov 2024
Vessel/Barge : DP2 Meo Resolution (ROV Support / DSV Vessel)
Position Title : **3.4U Inspection Engineer / Data Recorder (Offshore)**

Scope/Details:

- **Multi-Asset Jacket Structural Integrity & Baseline Surveys:** Spearheaded CSWIP 3.4U subsea structural data logging and QA/QC operations during the major 2024 SKO/SKG campaign onboard DP2 Meo Resolution across Temana, Tunku, Baronia, West Lutong & Kumang fields. Executed comprehensive ROV-based structural integrity assessments across key offshore jackets (TEDP-B, TEJT-C, BNP-B, BN14), covering GVI/CVI, CP profiling on primary members, nodes, conductor guide frames (CGF), boat landings, and caisson/sump assemblies.
- **Advanced Radioactive FMD & NDT Surveys (Cobalt-60):** Managed Flooded Member Detection (FMD) operations using Cobalt-60 Gamma Radiographic sources on primary/secondary jacket bracing members across various water elevations (up to -28m MSL). Enforced strict radioprotection safety protocols, source container transfer procedures, and site barricading.
- **Dual-ROV Spread Management & Real-Time Digital Capture:** Coordinated inspection routines involving dual ROV deployments—Work Class ROV Jerung 01 and Inspection Class ROV Seaeye Tiger 845. Managed dual-stream video acquisition and digital data overlay utilizing OBS Studio and IDAMS (Inspection Data Management System) Winair for live client observation and reporting.
- **Anode Depletion & Structural Anomaly Classification:** Logged and processed Selected Anode Inspection (SANI) evaluating Stages 1–6 depletion and remaining life. Categorized all structural defects, physical damages (PD), weld cracks (WD), and debris (DB) according to PCSB PTS / Criteria of Non-Conformance (CNC) priority ratings (P1, P2, P3, Observation).
- **Major Subsea Pipeline Survey Campaign:** Spearheaded comprehensive ROV-based pipeline inspection campaigns covering critical offshore trunklines and interconnecting lines (SKAPL329, SKAPL397, SKAPL400, SKAPL220, SKAPL238). Executed continuous log-processing of pipeline video, CP potential profiles, and bathymetry tracking for Depth of Burial (DoB) and exposure profiling.
- **Subsea Pipeline Components & Protection Integrity:** Conducted detailed integrity and positional surveys on underwater pipeline appurtenances and structural protection features along pipeline routes, including:
 - **Risers & Clamps:** Subsea riser touchdown zones, protection frames, riser clamps, and J-tube entry alignments.
 - **Stabilization Structures:** Flexible/articulated Concrete Mattresses, Pipeline Supports, Grout Bags, and Concrete Sleepers.
 - **Coating & Joint Integrity:** Concrete Weight Coating (CWC) condition, field joint fill integrity, corrosion wrap status, and mechanical damage.
- **Free-Span Suspensions & Seabed Scour Profiling:** Identified, logged, and dimensioned pipeline free-span suspensions (length, span clearance height, touchdown points) and seabed scour depressions along SKO/SKG pipeline routes. Evaluated free-span criticality against vortex-induced vibration (VIV) risk criteria.
- **Offshore HSE, SIMOPS & Permit Compliance:** Actively participated in daily Toolbox Talks (TBT), Job Hazard Analysis (JHA) reviews (approaching 500m zone, ROV launch/recovery, radiation/FMD), SIMOPS coordination with Platform OIMs/CSRs, and strict adherence to PTW Level 1 & Level 2 protocols.

Company : KL Petrogas / Surya Nautika
Client : Carigali Hess Operating Company (CHOC)
Project : Provision of Underwater Inspection Services (Block A-18, MTJDA - BLC Platform / Cakerawala Field)
Duration : 9 Oct – 19 Oct 2024
Vessel/Barge : Mermaid Sapphire (ROV Support / DSV Vessel)
Position Title : **3.4U Inspection Engineer / Data Recorder (Offshore)**

Scope/Details:

- **Subsea Debris Clearance & Rig Approach Survey:** Spearheaded subsea debris identification and clearance operations over a 200m x 200m grid perimeter (3m line intervals) at the south face of BLC platform to ensure a clean seabed footprint for jack-up rig positioning/approach (Naga 6).
- **WROV Operations & Heavy Subsea Intervention:** Coordinated Work Class ROV (WROV Quasar 06) deployments integrated with Sirrihatt Inspection Suite. Supervised WROV manipulator rigging and vessel subsea crane operations using dedicated open tray spreads / heavy rigging to recover metallic and structural subsea debris to the vessel deck.
- **Seabed Feature & Footprint Profiling:** Logged, verified, and cross-referenced multibeam / side-scan sonar contacts against live WROV video. Mapped previous spud can footprints, soft-pin depressions, seabed craters, gas seepage zones (AG1), and existing subsea pipelines (24" BLC to CKR pipeline) to eliminate punch-through and obstruction risks for the incoming rig.

- **Quality Assurance & Data Deliverables:** Managed CSWIP 3.4U Data QA/QC for pre- and post-debris clearance surveys. Recorded precise WROV/navigational fixes (Easting/Northing), dimensioned sonar targets (SC-04 to SC-11, LD-01), and generated Work Completion Certificates/Task Lists for CHOC CSR approval.
- **Topside & Asset Integrity Reporting:** Recorded Stand-off Photography (PSO) of platform topside/appurtenances, compiled Daily Operational Reports (DOR), and verified site work instructions/MOCs for any scope adjustments in compliance with CHOC Subsea Inspection & Maintenance Manuals.
- **HSE & Over-boarding Safety Control:** Enforced strict DPDSV 500m zone safety protocols, established over-boarding "Safe Zones" clear of subsea infrastructure, and executed Job Hazard Analyses (JHA) specifically for subsea crane lifts and WROV near-thruster operations.

Company : T7 Global Bhd / Tanjung Offshore Services Sdn Bhd

Client : Petronas Carigali Sdn Bhd (PCSB)

Project : Subsea Structural Inspection for Dulang Field Platforms (DLA, DLC & DLD)

Duration : 21 Aug 2024 – 6 Sep 2024

Vessel/Barge : AWB Petra / Dulang Platforms (DLA, DLC, DLD)

Position Title : 3.4U Subsea Inspection Engineer / Data Recorder (Offshore)

Scope/Details:

- **ROV Inspection Operations:** Managed real-time data recording and subsea structural inspection workflows using the Argos ROV spread deployed from AWB Petra across multi-platform assets (DLA, DLC, DLD).
- **Structural Inspection (GVI & CVI):** Executed real-time logging for General Visual Inspection (GVI) and Close Visual Inspection (CVI) across jacket structural members, main legs (Leg A2, B2), diagonals (VDM/HDM), horizontals (HOM), knee braces, framing plans at multiple elevations (EL -(-)9.14m, -(-)27.12m, -(-)48.16m), and conductor guide frames (CGF).
- **Cathodic Protection Survey (CPS) & Anode Assessment:** Monitored real-time Cathodic Protection (CPS) data logging to confirm status (target limits -800 mV to -1100 mV). Conducted condition and depletion assessments on sacrificial anodes (logging high-depletion anodes at 75%–100% wastage rate for SANI registers).
- **Caissons, Conductors & Riser Clamp Integrity:** Recorded inspection data for caissons/sumps (CS-S1 & support stubs), production conductors (CON020-024, CON028-032), and conductor guide frames, noting structural/lateral movements and marine growth coverage.
- **Anomaly Identification & Reporting:** Logging accumulated anomalies into the system, including metallic/non-metallic debris contact (scaffold poles, loose flood lines/hoses), grating-to-frame contacts causing restricted CP access, and minor conductor lateral movements.
- **Software & Deliverables:** Synchronized inspection logging using Sirrihatt Inspection Suite, maintained task list progress tracking, daily progress reporting (DPR/DOR), anomaly registers, and coordinate verification with PCSB CSR on site.

Company : T7 Global Bhd

Client : Petronas Carigali Sdn Bhd (PCSB - Sabah Asset / SBA)

Project : EWDP-Gas Platform Underwater Structure Inspection (ERB West Field, Offshore Sabah)

Duration : 13 Jun 2024 – 6 Jul 2024

Vessel/Barge : AWB Perdana Excelsior / EWDP-Gas Platform

Position Title : CSWIP 3.4U Subsea Inspection Engineer / Data Controller

Scope/Details:

- **Platform-Based Mini ROV Operations:** Managed real-time subsea inspection data logging for platform-based Mini ROV (Chinook) operations deployed directly from the topside, inspecting structural components down to (-) 62.0m LAT.
- **Structural Inspection (GVI & CVI):** Led real-time reporting for General Visual Inspection (GVI) and Close Visual Inspection (CVI) across jacket structural members, nodes, conductor guide frames (CGF), caissons, and riser clamp assemblies.
- **Cathodic Protection & Anode Assessment:** Systematically recorded CP potential measurements (ensuring readings met the -800 mV to -1100 mV protection criteria) and conducted visual/dimensional surveys on sacrificial anodes, flagging depletion rates $\geq 50\%$ for SANI logging.
- **Riser & Clamp Integrity:** Managed inspection data for gas risers, riser protection frames, and support clamp alignments, checking for marine growth accumulation, mechanical damage, or coating degradation.
- **Data Integration & Software:** Utilized Sirrihatt Inspection Suite and IDAMS Winair for live logging, daily progress reporting (DPR), anomaly tracking, video/photo synchronization, and client review verification.

Company : T7 Global Bhd

Client : Petronas Carigali Sdn Bhd (PCSB - Sabah Asset / SBA)

Project	: EWDP-Production Platform Underwater Structure Inspection (ERB West Field, Offshore Sabah)
Duration	: 16 Apr 2024 – 1 Jun 2024
Vessel/Barge	: SK Marco Polo / EWDP-A Platform
Position Title	: CSWIP 3.4U Subsea Inspection Engineer / Data Controller
Scope/Details:	• Major 8-Leg Jacket Inspection: Executed comprehensive 3.4U data logging and inspection reporting for an 8-leg major production jacket (EWDP-A) using a top-side deployed Mini ROV (Chinook) spread. • Cathodic Protection & Anode Management: Oversee Cathodic Protection Survey (CPS) data logging across 248 sacrificial anodes, evaluating galvanic health, depletion percentages, and structural attachment integrity. • Multi-Conductor & Caisson Integrity: Managed inspection workflows for 30 conductors and main production risers, logging marine growth profiles (MGI), corrosion pitting, and jacket guide alignment. • Flooded Member Detection (FMD) & NDT Coordination: Verified and logged Flooded Member Detection (FMD) testing results across critical flooded/non-flooded structural bracing members to detect potential internal ingress or weld failure. • Live Reporting & Client Deliverables: Controlled real-time inspection data acquisition via Sirrihatt Inspection Suite and IDAMS Wincair, compiling anomaly registers and daily executive summaries for PCSB representatives on site.
Company	: Sirrihat Subsea Services Sdn Bhd
Project	: Onshore Engineering, CAD & Reporting Support (Subang Jaya, Selangor, Malaysia)
Duration	: October 2023 – January 2025
Position Title	: Data QA/QC Coordinator / Onshore Technical Support
Scope/Details:	• Final Deliverables Reporting: Converted rough daily logs from offshore operations into polished, formal client final inspection reports. • Data QA/QC Auditing: Verified accuracy of subsea video footage, timestamps, and anomaly descriptions against physical offshore logs. • Interim Offshore Support: Provided continuous onshore technical, reporting, and QA/QC management between 2024 offshore campaign mobilizations. • Database & Asset Management: Uploaded validated offshore data and inspection logs into integrity software systems. • CAD & Drawing Markups: Marked up CAD and 'As-Built' drawings to reflect new subsea findings, structural repairs, and anomalies. • Work Pack & Procedure Creation: Wrote detailed, step-by-step inspection procedures and checklists for upcoming subsea campaigns. • Desktop Integrity Studies: Reviewed historical integrity reports to identify targeted areas of interest for future monitoring campaigns.

TECHNICAL EXPERTISE SUMMARY

Underwater Inspection & NDT	: Planning and executing NDT and visual examinations on jacket structures. Experienced in CP surveys (Buckleys Bathycorrometer, ISIS/IICORR), UT wall thickness (Cygnus UT gauge), FMD (Impact Subsea / Gamm@scan), GVI/CVI, and Underwater MPI & ACFM (Assisted the ACFM Operator). Coordinated subsea debris removal, platform manual mini ROV launches, and dive support operations.
UWILD & Vessel Integrity Surveys	: Executing UnderWater Inspection in Lieu of Drydocking (UWILD) on offshore vessels, MOPUs, and barges for Class certification (RINA, ABS). Detailed inspection of main propulsion thrusters, sea chest strainers, bilge keels, rudder assemblies, hull shell plating, and ICCP/anode integrity.
Sonar & Pipe Tracking Operations	: Operating Multibeam Echosounder (MBES Sonar) for high-resolution bathymetric profiling, seabed scour monitoring, and seabed clearance. Utilizing Subsea Pipe Trackers (TSS 440 / TSS 350) for pipeline route tracking, Depth of Burial (DoB) measurement, and exposure mapping.
Pipeline Integrity Inspections	: Conducting subsea pipeline inspections using ROV and diving teams. Expertise includes subsea gooseneck, spool, flanges, sleepers, buckling initiators, valve isolation status, encapsulation clamp installation, leak detection, and subsea obstruction clearing.
Data QA/QC, Analysis & Troubleshooting	: Rigorous CSWIP 3.4U Data QA/QC auditing of video logs, anomaly cross-verification, anomaly register tracking, trend analysis, Daily Progress Reports (DPR), and client final reports. Onsite offshore hardware and software troubleshooting across ROV video feeds, serial data comms, multiplexer routing, and inspection suites.
